

Amendments to the Specification

Please replace the paragraph beginning on Page 2, line 28, with the following amended paragraph:

When the alarm clock is set and the system is on standby, the projection system can project two dots on opposite sides of the ceiling. During the night, the distance between the dots decreases representing the decreasing time before the alarm goes off. If someone has put a note under the clock the night before, a snapshot of the note will be projected onto the ceiling when the two dots meet, ~~so~~ at the set alarm time.

Please replace the paragraph beginning on Page 4, line 15, with the following amended paragraph:

An other option could be to create the possibility that when two people get into bed at different times, the first person in bed could leave a message for the other ~~beby~~ projecting a note onto the ceiling. The image would be projected within a 'soft spot', of low light intensity, so as not to wake the already sleeping partner.
